## Evening Brief

Date: Thursday July 26 , 2018

---

### Weather Summary

There was more mixed dry and wet lightning the past 24 hours across NE Nevada, NW Utah and Southern Idaho. Lightning became wetter across far eastern ID, Western WY, as well as southern areas of UT and NV.

Some showers and thunderstorms will redevelop across the southern half GB each afternoon Thursday and Friday, but will become increasingly isolated in coverage and confined further south each day.

Hot, dry, and breezy conditions will continue across the northern half of the GB into the weekend. Strongest winds will be in Idaho into Western WY, gusting in the 15 - 25 mph range. Even Central and Southern areas of the GB, that avoid the isolated clouds and showers could get very hot and dry during the afternoon hours, with holdovers popping up from recent lightning in timbered areas.

---

### Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	4	Moderate Initial Attack Activity
National	4	New Fires and Acres: 47 fires for 5,822.1 acres; 25, 946 acres large fire growth

---

Great Basin Fuel Status [interactive link](#) (Use Edge, Chrome or Firefox browsers)

**Fuels and Fire Behavior advisory has been issued for [Nevada](#)**

### Fuels/Fire Potential

Sagebrush live fuel moisture values are near to below normal across much of the GB and are on the downward trend rapidly due to recent hot/dry weather.

However, across Southern parts of Utah & Nevada and the AZ Strip live fuel moisture levels have flattened out or begun to increase due to the recent persistent moisture. Elsewhere across the GB the sagebrush live fuel moisture values are closer to normal or even above normal for late-July, but have peaked. Higher humidity and scattered wetting rains the next few days will minimize any ignitions from growing rapidly in southern areas....but northern Nevada and Utah will continue drying rapidly this week. Idaho continues to rapidly dry, with ERC's in the 80<sup>th</sup> to 90<sup>th</sup> percentiles now in many areas. Increased initial attack from recent lightning in Southern ID/NE Nevada and NW Utah is again possible today.

The significant carryover fuels from 2017 and additional critically dry fine fuel crops from the spring rains in western/northern NV into parts of southern ID/western UT are still significantly contributing to fire spread after just a few dry days. Sagebrush fuel moisture continues to decrease in these areas with fuel moisture now below critical levels across parts of northern NV into Idaho and contributing to fire spread.

#### Resources:

##### Aviation within the Great Basin

- o 1 VLAT, 5 LATs, 4 CL-415
- o 21 SEATs, 2 Fire Bosses
- o 11 Type 1 Helicopters / 11 Committed
- o 10 Type 2 Helicopters / 10 Committed
- o 21 Type 3 Helicopters

##### Crews Committed within the Great Basin

- o 14 IHCs Committed / 0 Available
- o 25 T-2 IAs Committed / 0 Available
